with a friend

Eggs

© Chloe Campbell 2016

Frogs lay up to 4,000 _____ at one time. They lay them in water or _____ places. There is a jellylike covering that _____ the eggs.

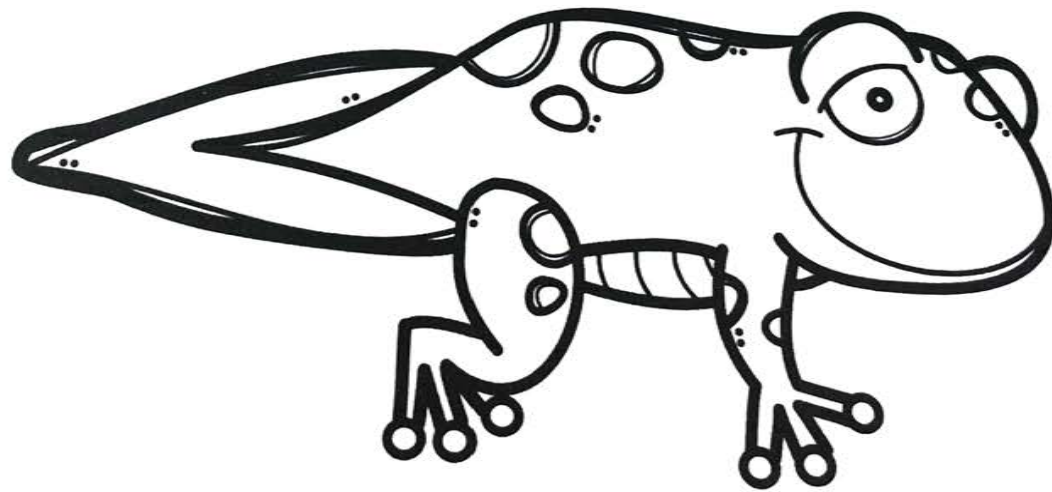

Only a few eggs will develop because lots are eaten by _____, insects, and other creatures.

Ways to Use:

- Whole Group
- Teacher Led Instruction
- Partner Project
- Substitute Plans
- Center Activity
- Take Home Activity with Family

Froglets

Frog

The froglet's tail disappears and the _____ are now fully grown. They shed their _____ and lips to make their mouth wider. When the lungs are finished developing and the froglet makes it's way onto the _____, it becomes a _____.

**Purchase now to enjoy
a low prep activity!**

**Students will love
creating their own book
to show the life cycle of
a frog!**
